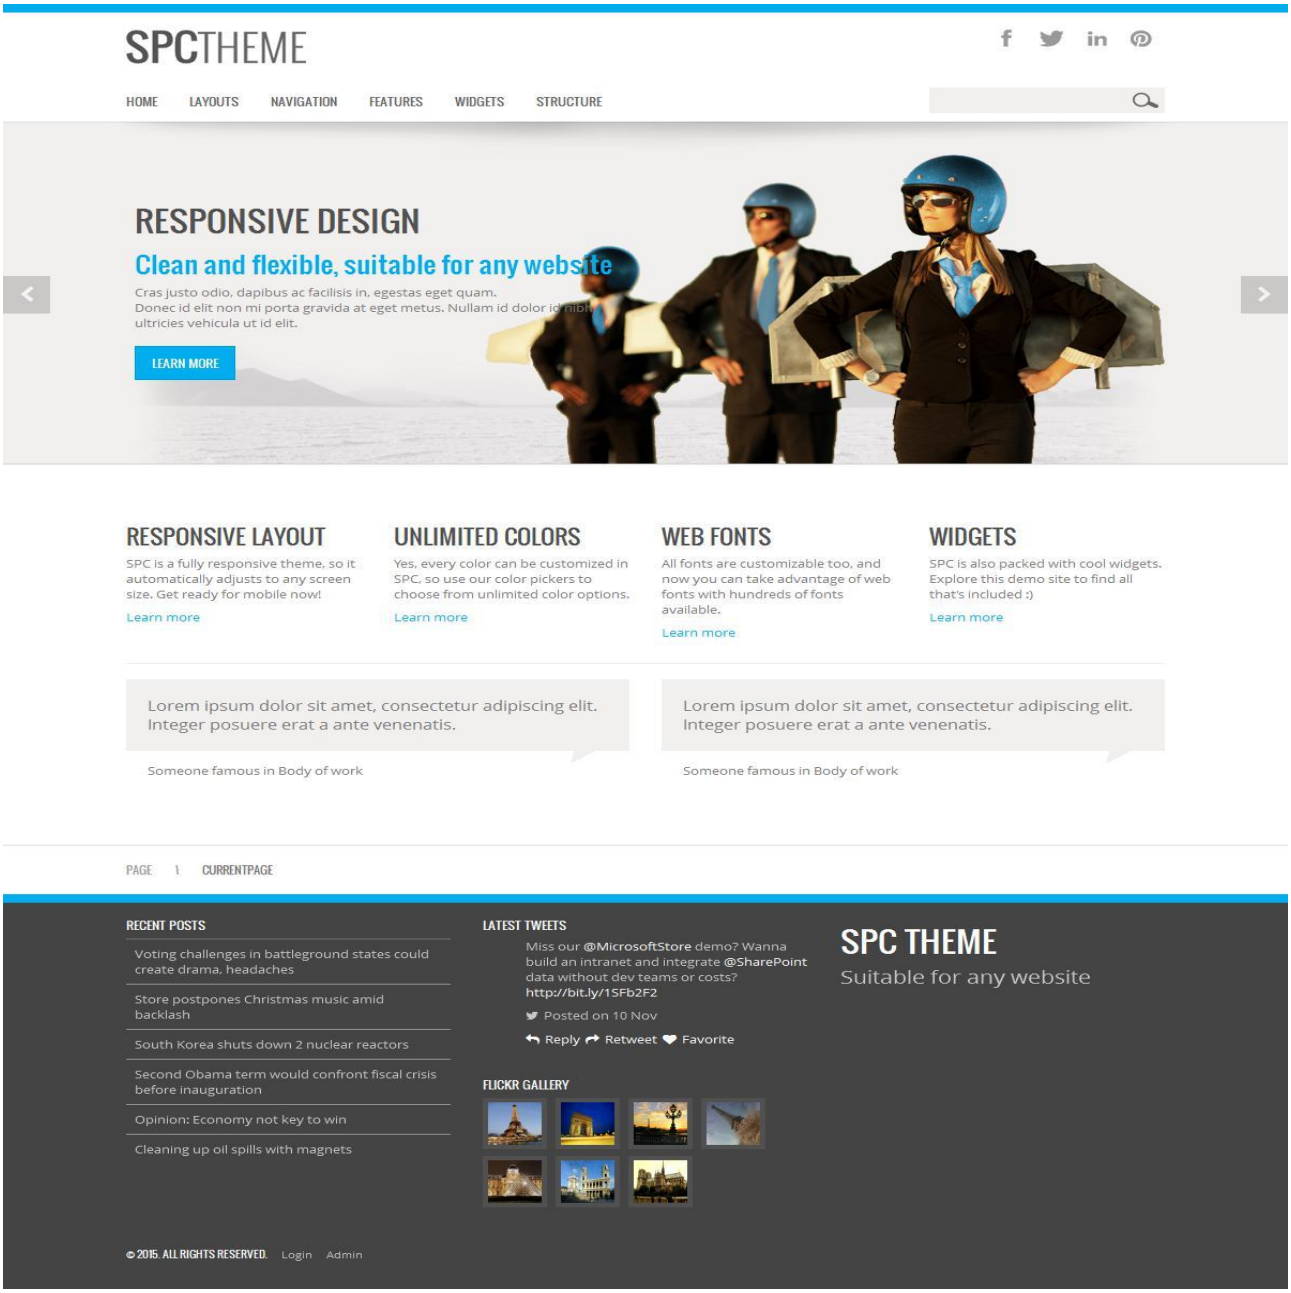
Theme Details



Theme name	SPC *(based on SPC)*
Platform	Drupal 7
Date generated	2015-16-11 16h16m
Customer email	mail@bind.pt

Installation

Files available for download

Your custom theme includes the following files:

SPC.Drupal7.zip *This is the installation file*

SPC. Drupal7.SetupGuide.pdf *Current documentation file*

SPC.Drupal7.DemoContent.zip *This is demo content file*

Installing and applying the theme

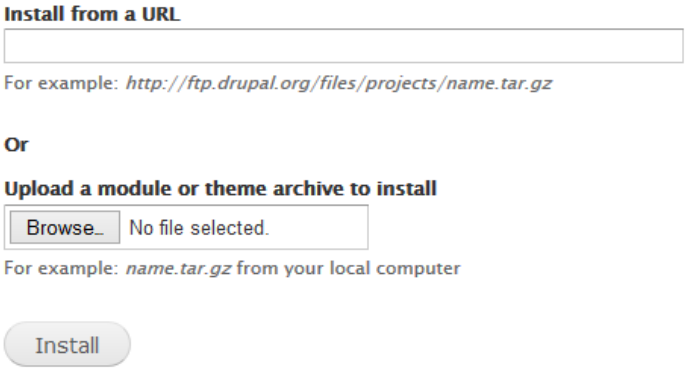
Your installation file is **SPC.Drupal7.zip**

For install the theme SPC you need to follow one of two simple ways to install themes in Drupal:

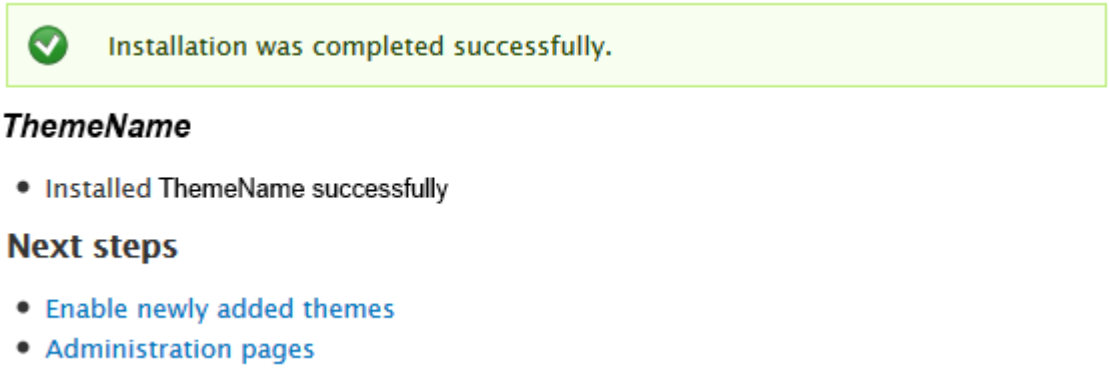
1. **Install theme in Browser (Drupal Installation):**

   From the top menu bar, select **Appearance** and then click on the Install New Theme link found at the top of the page.

   On the install page you can either enter the entire URL where the theme zip file is located or, if you downloaded the file archive, use the *Browse* button to find and upload the file from your computer. The field should reflect the path to the folder you downloaded the zip file. Click the Install button to upload and install the theme.



Once completed, you should get a success message. Click *Enable Newly Added Themes* to continue to the themes page for the next step.



Go to "*Disabled Themes*" and "***Enable and set default***" the theme installed. Enjoy!!!

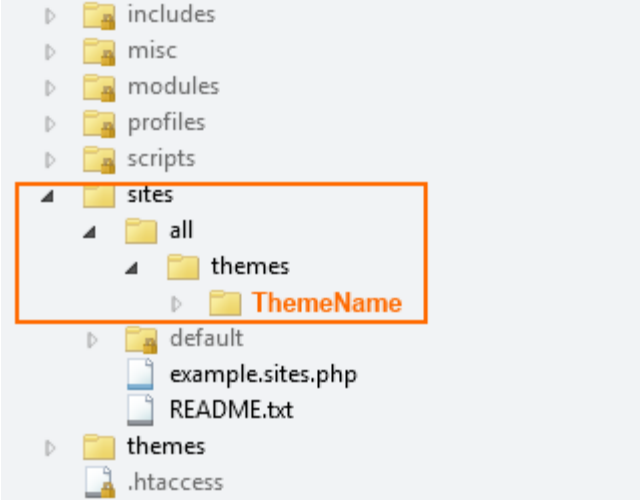
Note: *Only the theme file (SPC.Drupal7.zip) can be installed.*

2. **Install theme with FTP**

Drupal keeps its skins in the **themes** subfolder.

Extract the files under the **themes** subfolder (**sites** -> **all** -> **themes**). This can be done through **cPanel -> FileManager**.

If you don't have **cPanel** or you prefer using an **FTPclient**, you can extract the archived theme to your computer and then upload the theme's folder to same directory as explained above.



You should now be able to see the theme at your **Drupal Administration Area -> Appearance**. Enable it and set it as default.

Further adjustments

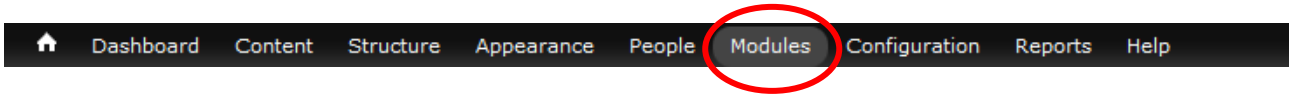
BindTuning provides in our themes, layouts for all types of content types supported by Drupal. Since Articles, Blog, Book, Forum, Poll to a simple Basic Page, everyone has their way of showing content on screen.

We gave some emphasis to the *Blog* and implement options to your presentation was cared for and appealing. Therefore this content type has the following features:

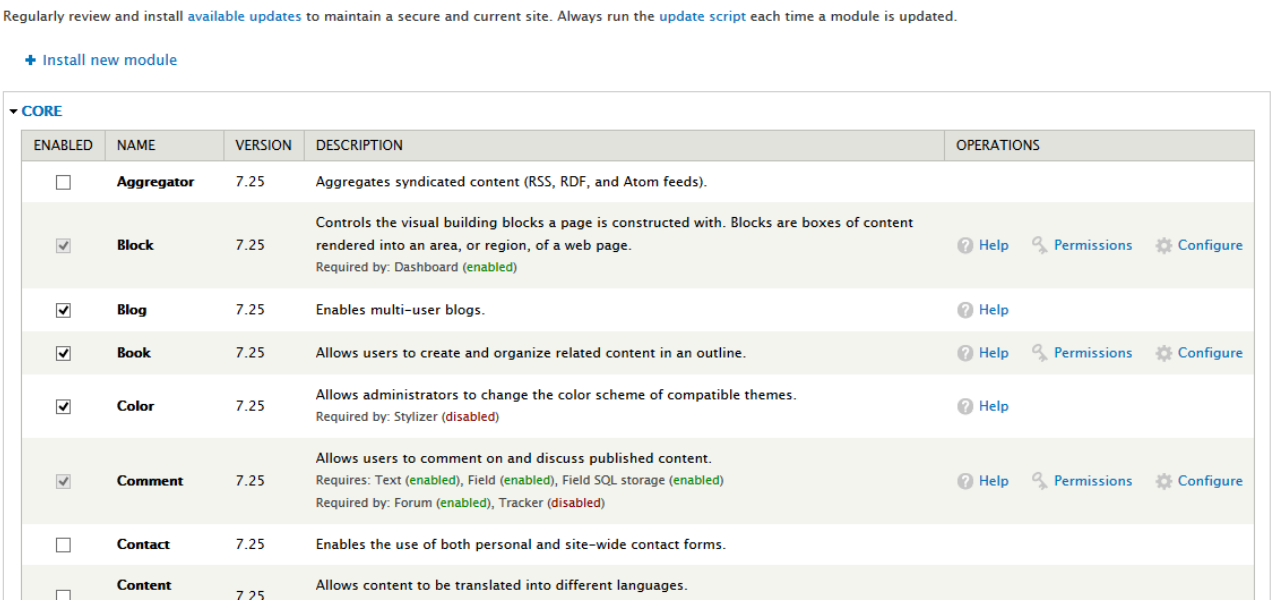
- 6 different layouts;
- possibility of adding author information (image and description, where the description field is available when installing the theme. Go to **People** -> *User* -> *(edit)* add a text *description* for this user);
- possibility of defining *navigation* between post's and what type of *navigation* to be displayed
- ability to *share* the post directly to *social networks*

The native installation of Drupal, by definition comes with 2 *content types*, **Article** and **Basic Page**. For enable other content types you will need to active then.

1. Navigate to **Modules** and scroll to **Core** modules;



2. Check the modules you want activate, like **Articles, Blog, Book, Forum or even a Poll** and *Save Changes*;



Theme Settings

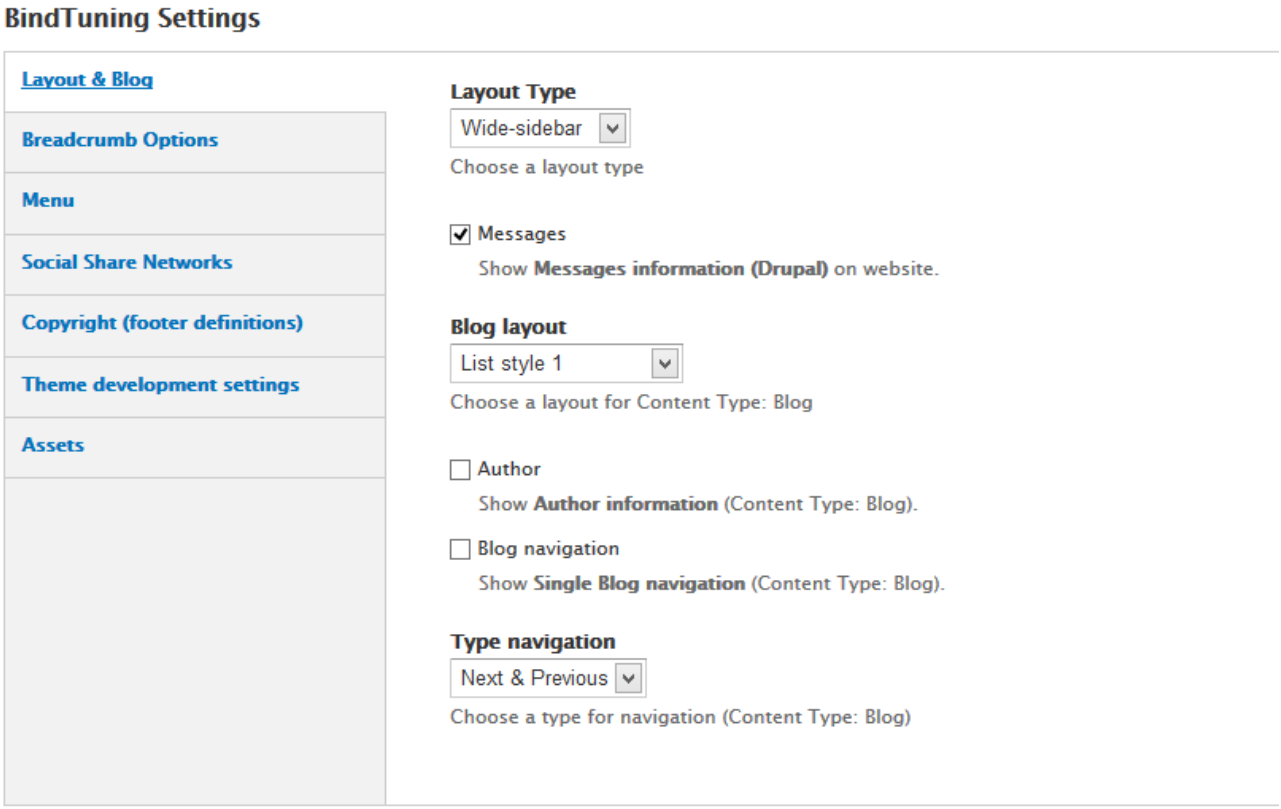
BindTuning Theme *Settings*

BindTuning provides has advanced *BindTuning Settings* panel that is loaded with the theme. There is a set of options that facilitates the optimization and customization of your Drupal website.

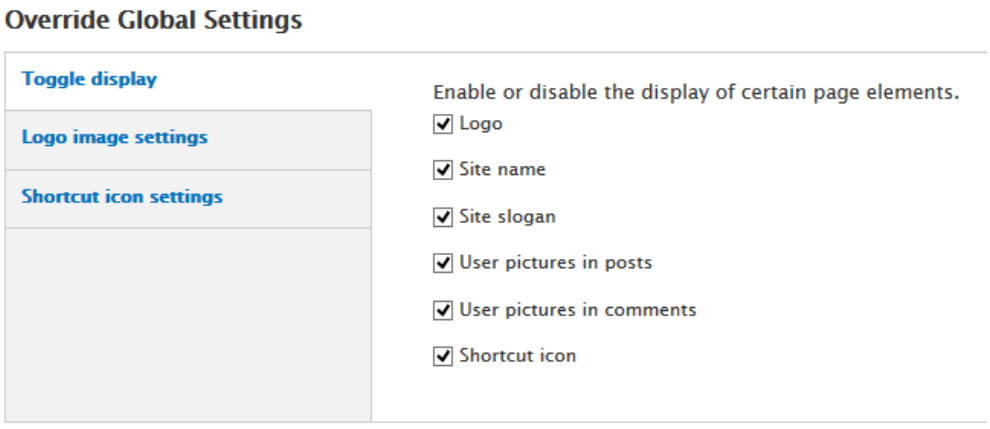
Go over in these docs but please take some time and navigate through each tab.

Go to **Appearance > Settings** *(off the BindTuning theme)* and take a look. We've organized them into logical sets and have given descriptions for items that need it.

Be sure to hit *Save Configuration* button, to save your settings once you are done.



Are also available all native Drupal *Global Settings*, so that if necessary we can change.

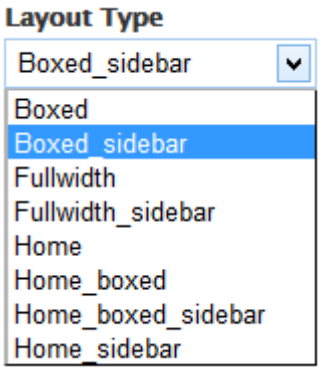


Layout & Blog:

Layout Type:

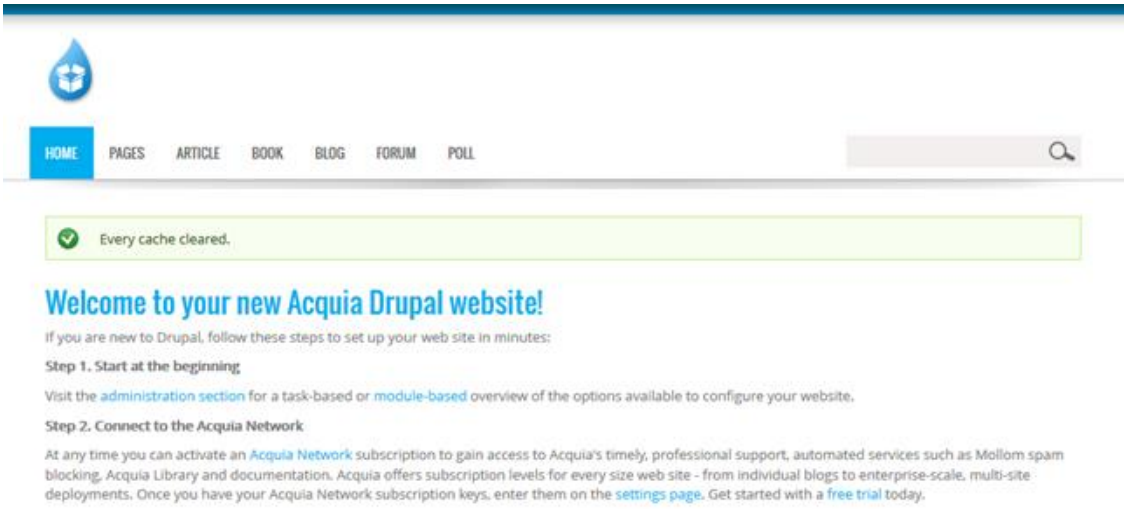
In this option we can set a layout for your website, changing this value you will modifying the appearance to all your pages.

You can define layouts with or whiteout *sidebar*, *full width*, or even a *boxed* layout, it always depends the chosen theme.



Messages:

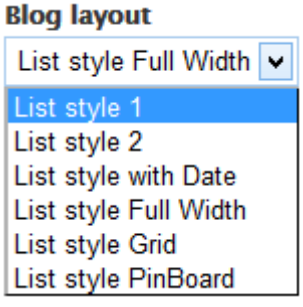
Ability to view internal messages in the Drupal website.



Blog Layouts:

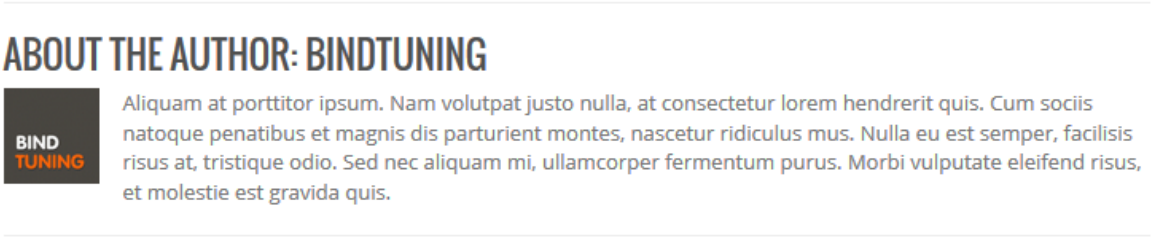
This option is only available for the Blog module.

Choose the layout that you which and see the differences.



Author and Blog navigation:

These two options, with specific functions, display information when you are inside the post.



Type navigation:

Here you can choose what type of navigation inside the post. Since *Next and Previous*, or else the *Name* for next and previous post.

Next & Previous:

Post name:

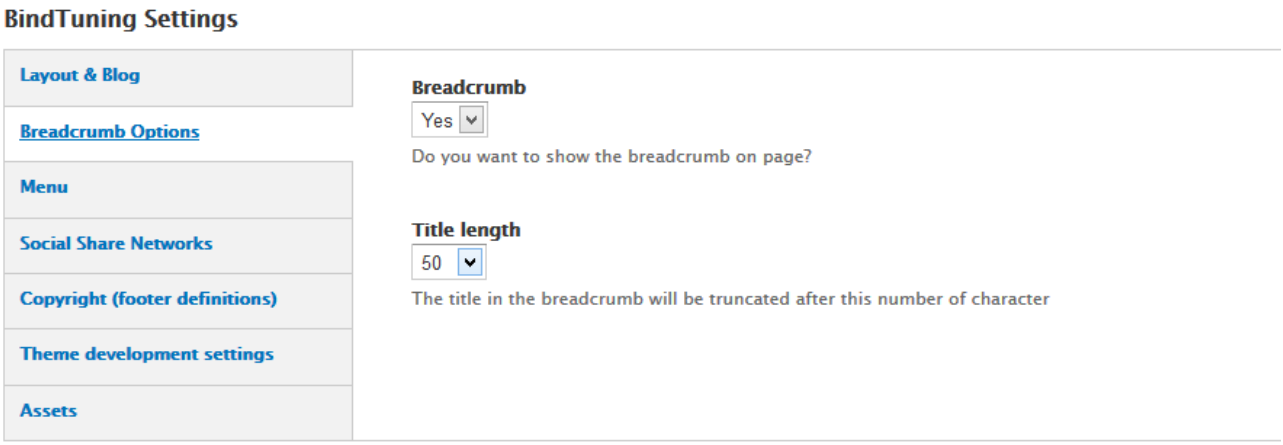
Breadcrumb Options:

Drupal has a native way to implement breadcrumb.

BindTuning added to this possibility two options for our themes become even more flexible.

Even after customization carried out in bindtuning.com, you can set whether to show or not the breadcrumb.

The second option concerns the fact that some pages contain titles too large, and for this we can chose the amount of characters are displayed in the breadcrumb.



Note: *This setting is only visible in the respective layouts.*

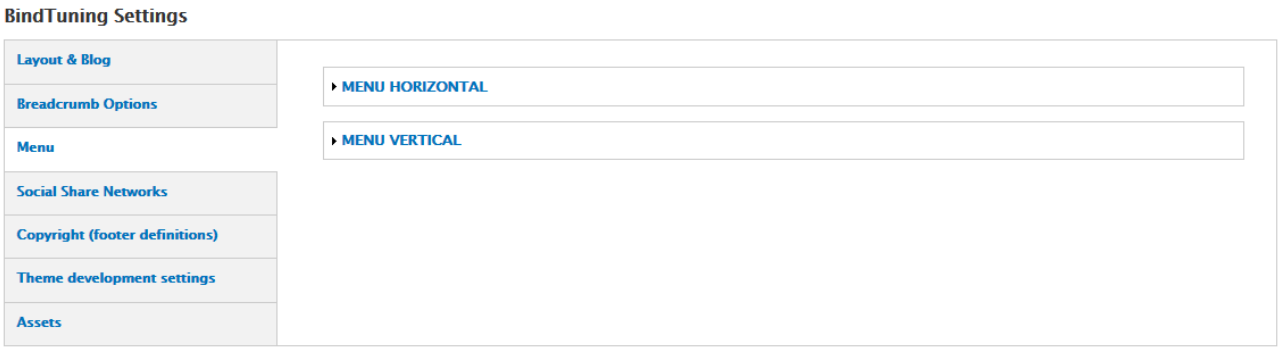
Menu:

Our themes contain two regions where the menus are implemented.

These areas are identified in HTML with unique identifiers for the effect (horizontal Menu id=**MenuH** and **MenuV** for Vertical).

For the menus:

- We can define for each region the menu to be shown and even the type of layout that it will have.
- Layouts for horizontal can be of three types and vertical contains one more option, so you have a total of four choices.
    - *Horizontal*:
        - None
        - Default
        - Mega*
    - *Vertical*:
        - None
        - Default
        - Mega*
        - Accordion

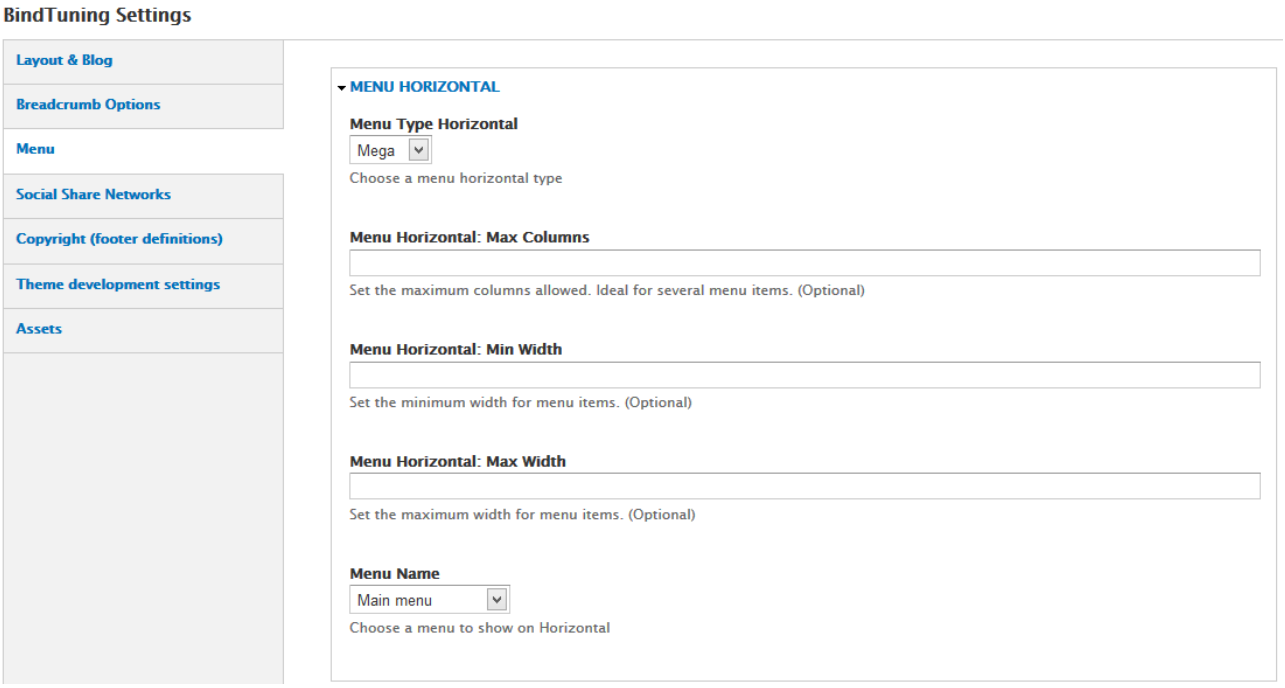


***Mega Menu (*Options*):**

The new version of Mega Menu have the ability to format some values to have more control in the construction of this type of menu.

So, for take advantage of this chance, just place desired values in the fields:

- **Max Columns:** *Set the maximum columns allowed. Ideal for several menu items;*
- **Min Width:** *Set the minimum width for sub-menu items (by default, the minimum width is 100px);*
- **Max Width**: *Set the maximum width for sub-menu items.*

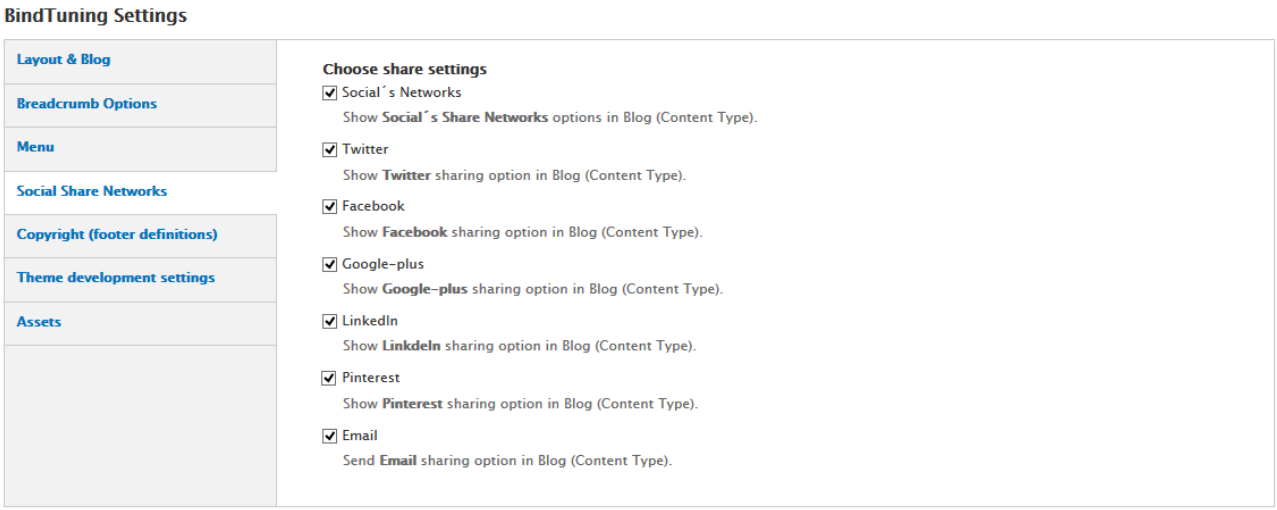


These choices are optional and also only available for the Mega Menu.

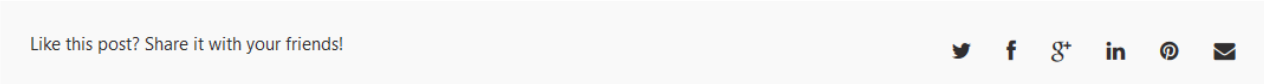
***Note:** There is also the possibility that the menu be omitted, for this in the Menu Type, should be chosen the Hide option.*

Social Share Networks:

Share a direct link to your post on social networks for who want disclose your article. Turn social networking for available the content.



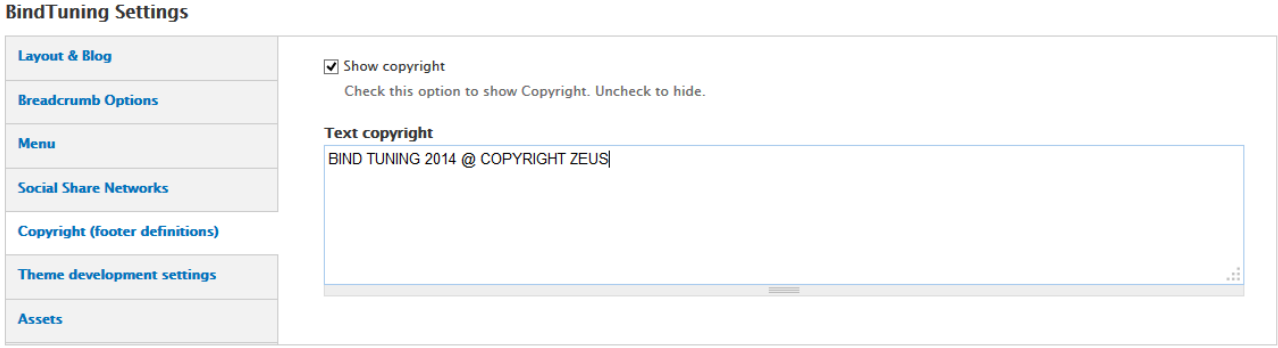
This will appear like this:



Note: That this option is only available for the module content created in the Bog.

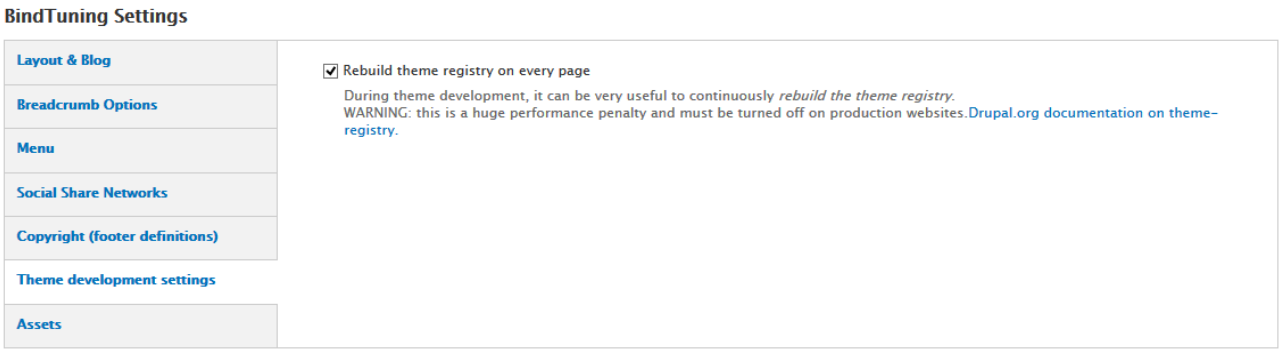
Copyright (footer definitions):

Define the text to be available in the footer of your website.



Theme development settings:

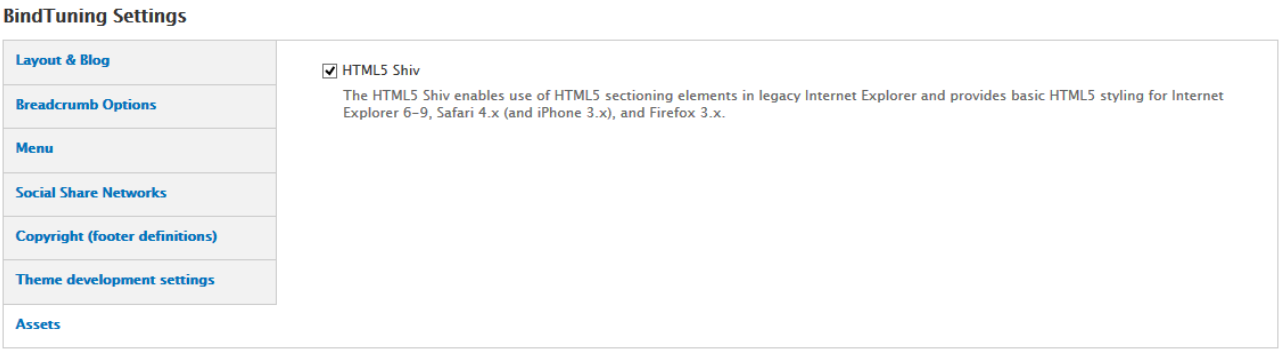
Drupal 7 theme functions and css styles are built into a theme registry (cache) for improved performance. During theme development you will be making frequent tweaks and updates and would normally need to clear the cache every time you wanted to see the changes take effect.



This setting, rebuild the theme registry on every page request so that you see your changes instantly. You should not enable this on a production site because rebuilding the theme registry adds a performance impact to each request, but it's a great option while developing your theme so that you can see your changes take effect without having to manually clear the cache each time you make a change.

Assets:

Activation of HTML5Shiv script, which was created to make browsers that do not recognize the new tags, start to recognize the new HTML5 elements. It's only used, when a previous version of Internet Explorer 9 is ben called.

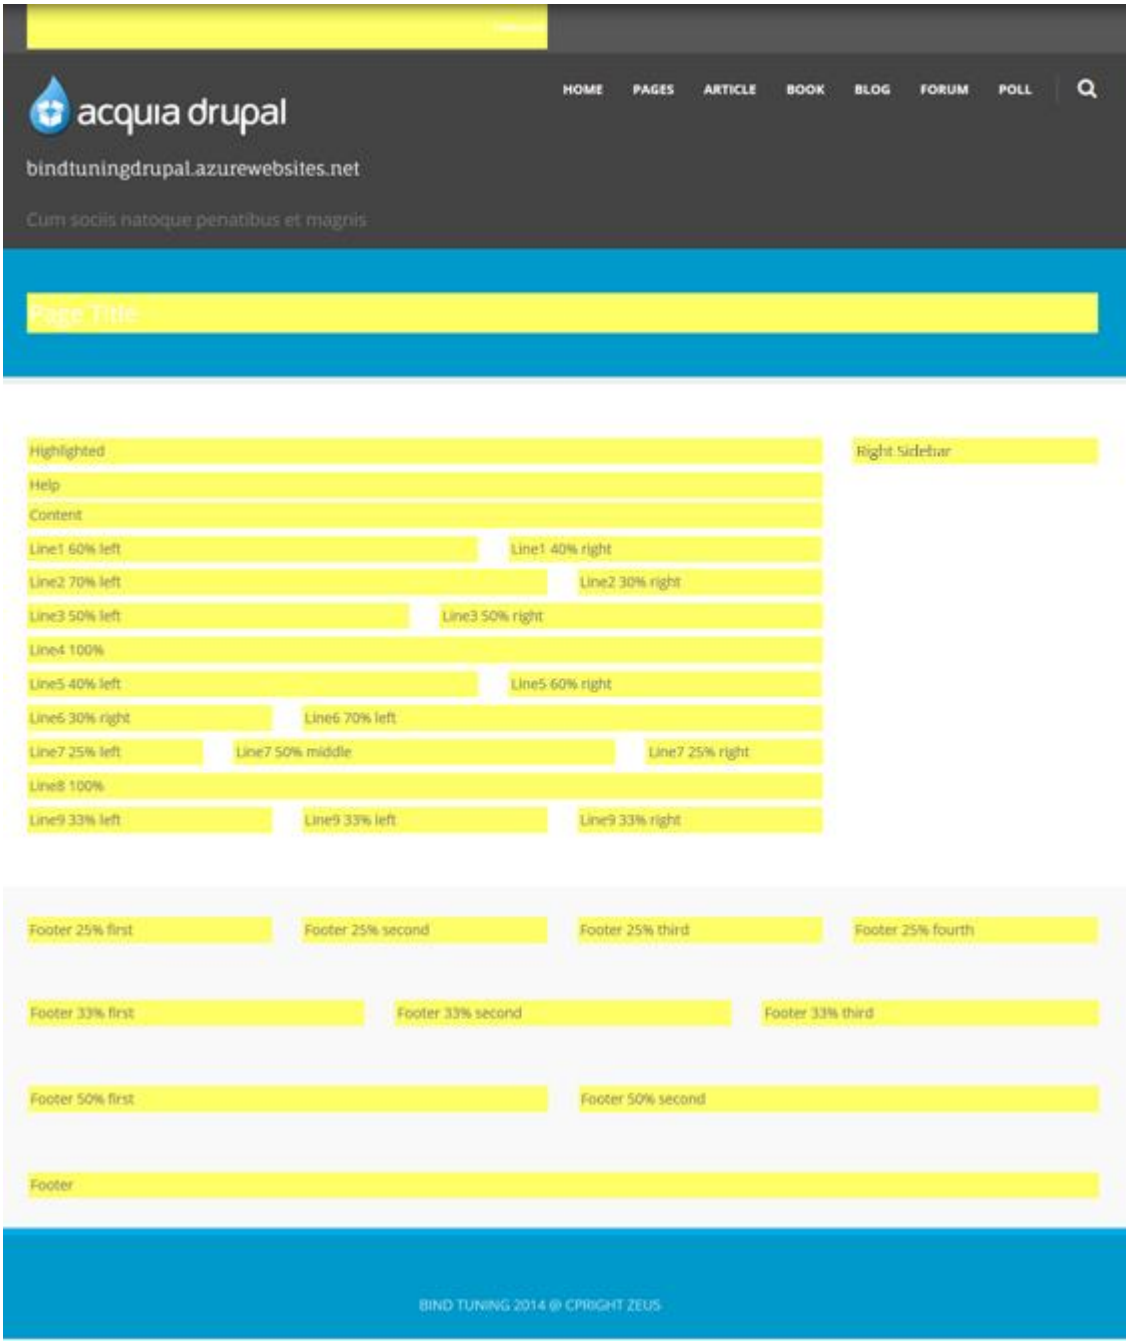


Regions

Imagine that your Drupal web site are divided into rectangles, this is *Regions*.

Regions are logical areas defined in your theme and BindTuning themes have a lot of regions so you can put content in the way you want.

Below we present an illuminating picture of the regions, in one of our themes, so you can be aware of amount areas that we include.



On the regions we can put any type of content, Drupal already provides blocks with contents in order to apply. For this we only have to go to *menu* -> **Structure** -> **Blocks** and apply content in regions.

CSS Compression

This theme is delivered with **compressed CSS files**, for **performance improvement reasons** (making websites load a lot faster).

Each theme/skin contains a **style.css** and **style.uncompressed.css** files. In case you need to edit your CSS, or if you just don't want it compressed, you can rename it and use it, instead of the compressed version.

This theme includes several other CSS files (for containers mainly). Uncompressed versions will be sent upon request.

Customer support

BindTuning is proud to deliver excellent support service to its customers. You can access support in multiple ways, described below.

Standard support

BindTuning Knowledge Base

Our knowledge base is an excellent resource when you need support. Access our team's articles with solutions to common questions or issues previously encountered by others. Suggest further enhancements to our products by posting your ideas, or vote on other users ideas.

Please note that our knowledge base is a resource for search and community sharing. Other options are available for urgent support.

To access the forum please visit http://support.bind.pt/forums

BindTuning Helpdesk

You can also choose to post your questions and suggestions directly to our support team, through our helpdesk system.

Your question will be reviewed and forwarded to the proper department.

Always remember to mention your invoiceID when submitting a new support ticket.

You should receive an answer in less than 24 hours.

To access the forum please visit http://support.bind.pt/tickets/new

Premium Support

- Theme installation / upgrade
- Manual theme adjustments and customization
- Further changes to themes
- Premium support is required beyond 60 days after purchase

For further information on Premium Support please visit www.bindtuning.com or email us at support@bindtuning.com
